SLA

Certain solvents, ointment constituents, and ointments produce medium to very marked thickening of the guinea-pig epidermis upon repeated local application, while others lack this characteristic. Depending on concentration or chemical properties, individual substances additionally provoke special irritant effects. Although there can be some parallelism between epidermal changes and irritant effects, the latter are not always reflected in the histological picture. The application of the polyethylenoxide ethers of the
dodecyl alcohols (Sch 600) is reported as a surface
anesthetic in the treatment of progressing skin lesions
with pain or itching on the basis of 63 cases. It showed
a good analgesic effect in painful wounds, burns and
